# How to login to Macbook with Xcreds
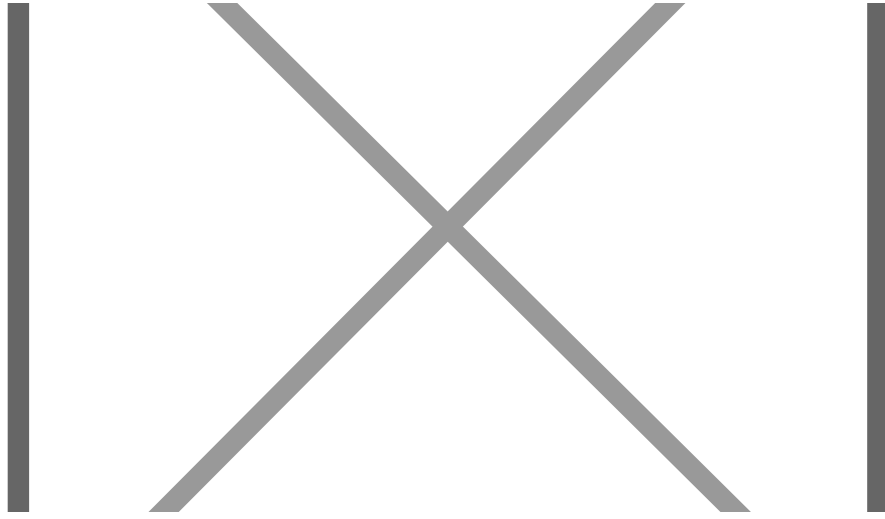

Welcome to our new login screen for Mac Devices.

If you've logged in to this device before, simply sign in as usual. If you have not signed into this device before or have had your password reset, you can follow these instructions to get your local profile created/updated.

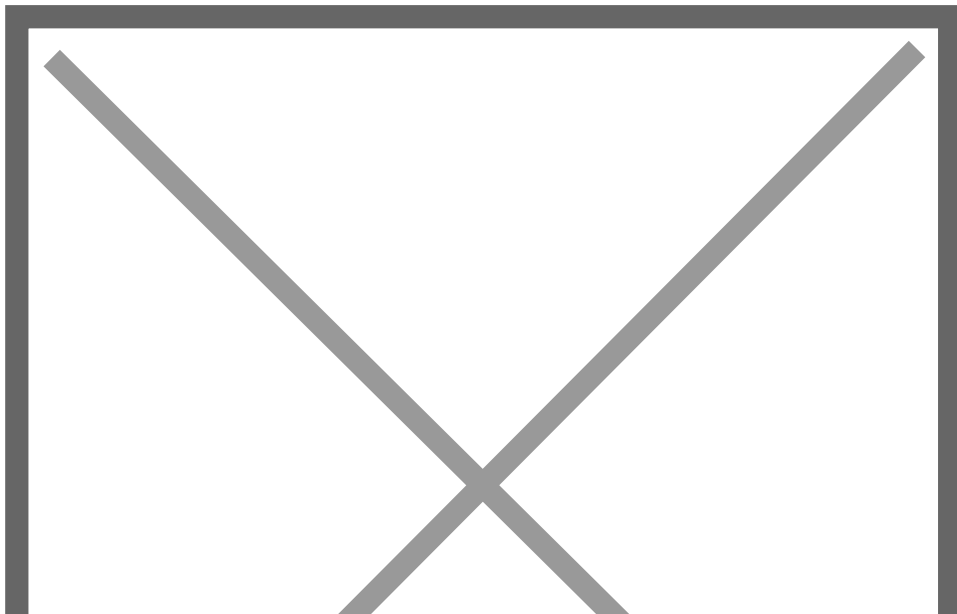

To update or create your local account, follow these steps

Start by clicking on the "Switch login window" button on the lower right hand side of the screen.

This should change the login window to be the same as below. Enter your full district email and click next.

The window will change again and you will be prompted to enter your password. This is the same password that you use to get into your email.

Once it accepts your password, it will create/update your local account and let you in. You will not have to repeat this process unless you get your password changed or your device reset. From this point forward you may log in on the default screen with just your username and password.
